

Technical Data Sheet

ZAP Zinc Activation Paste

Zinc sacrificial anodes for corrosion control
of steel in concrete

Description

ZAP is an electrolytic paste which is developed specifically for galvanic zinc anodes when applied in dry environments. ZAP keeps the zinc surface moist and active as it contains a unique blend of moist-binders and zinc surface activators.

It enhances the performance and anode efficiency and guarantees a continuous current density even in dry environments like concrete and arid soils. ZAP has a sealant-like behavior, is a high viscous and can be applied with sealant-guns.

ZAP comes in standard 600 ml flex packs “sausages” (aluminium with recycled plastic liner) which are used with standard manual or battery charged sealant guns.

Sausage volume	600
Spec. Weight kg/l	1,66
Weight in gr.	1 kg.
Stock conditions	< 30°C < 50% RH
Maximum storage time	60months (original packing)
Packing unit	Box 12 or 15 sausages
